

SAFE as Houses

This CPD is intended to look at Fire Safety within residential buildings. We also look at understanding and identifying the various types of building and applying the correct fire technology within.

Duration - 1 hour

Who should attend - Consultants, designers, installers, maintainers and end users of fire detection and alarm system

External Approval - CIBSE, CPD Service

Course details

The presentation is a guide to Fire Safety within residential buildings. We specifically focus on best practice solutions by utilizing current technology within the Fire Detection and Alarm industry, to enable designers and consultants to protect the occupants within these buildings without the risk of generating unwanted fire alarm signals, with a view to enhancing and improving the current and future fire strategies adopted in many high risk residential buildings across the UK.

Certificates of completion are awarded to attendees completing the course.
